

**Editor's Comment:**

In my opinion, this paper is not well enough improved to be accepted for publication.

The authors did not answer many questions of the reviewers and in addition, the paper does not have any summarized table or figure. In my opinion, the paper needs to be improved by presenting references for all statements, by synthesizing some tables from the literature, regarding results obtained in different areas applying conservative agriculture, on production, soil, etc.

Consequently, I do not recommend accepting the paper for publication in this form.
