PART 1: Review Comments

| | Reviewer's comment | Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here) |
|-------------------------------------|---|---|
| Compulsory REVISION comments | | |
| Minor REVISION comments | The discussion needs to be more robust. The author should state the prevalence of placental praevia in the institution and compare the rate with those of previous studies especially local studies. If blood transfusion is a major complication of placental praevia in that centre to the extent of up to 93% of cases, what responsible for this? Was the transfusion done before surgery or during/after surgery since the incidence of postpartum haemorrhage (PPH) is not as high (24.8%) as that of transfusion? It will also be good if the author can compare the position/status of the leading surgeon, whether consultant or residents, with the incidence of PPH and subsequent blood transfusion. | |
| Optional/General comments | Minor errors in form of spelling mistake or omission are marked as comments in the manuscript. Thank you for the privilege to review the article. | |
