

Editor's Comment:

I carefully read the manuscript, the reviewer comments and responses of the authors on the comments.

The authors made adequate changes in the manuscript from the title to the references.

But, figures 2 and 4 are without title. In the version before revision the title was present so probably authors forget to place title. I suggest that authors insert title of the figures (with references as it in the last version) and after that the manuscript **is acceptable for publishing**.
