<b>Compulsory</b> REVISION comments	This is a retrospective study conducted in Saveetha medical college and hospital during the period of December 2020 and May 2021. The study includes 260 cases, of which 130 CVA patients and 130 control group. The major results indicate that some haematological parameters of ischemic CVA patients were altered. The presence of persistently altered status of haematological parameters cerebral ischemic event indicate that these parameters can be considered a simple inflammatory indicator during the development of ischemic damage. However, hematologic parameter alone is not enough to predict patient recovery. Please comment on this in the DISCUSSION (see, doi: <a href="https://doi.org/10.3390/biomedicines9091226">10.3390/biomedicines9091226</a> )
