PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<ul style="list-style-type: none">- The subject is of moderate interest, because it was already evoked many times in the literature.- There is a relatively small number of patients included in the study. There may be a selection bias between groups 1 and 2. The analysis was mainly descriptive except for the multivariate analysis, and there was no forest plot included. Therefore the statistical significance of the obtained numbers is uncertain or may lack accuracy- The references are old despite their importance. The article needed more updated information especially including systematic reviews and meta-analyses- Finally, the subject could have been more developed and the statistical analysis more elaborate with also mention of the baseline characteristics of the study patients. The logical sequence was missing and the conclusion led to data already known to health professionals	
Minor REVISION comments	There were spelling and syntax errors. The phases lacked cohesion at times	
Optional/General comments	None	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
