

**Editor's Comment:**

Mini review based article is fine still the authors are requested to do the minor revision

1 Butterfly pea (*Clitoria ternatea*) is a plant with the potentiality to inhibit the fish pathogens because its rich of bioactive compounds. Leaves, stems, roots and flowers contain diverse substances among which there are alkaloids, tannins, glycosides, terpenoids, phenols, reducing sugars, flavonoids etc.

2 Grammatical errors in the text.

3. Abstract and conclusion so many can please revise.
