PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVIEW comments	<p>Theme:Experimental with social - economic - ecological contribution.</p> <p>Summary:This section should present the study in general and meaningful terms so that the reader takes interest in reading the entire work: It is necessary to mention the objective as an important element of the investigation; the methodology is fine but it should be more explicit as well as the results, these should be punctual.</p> <p>Keywords:The UNESCO Thesaurus is a glossary of universal terms that are used to publish articles and allow easy access when it is published. Agriculture – Agricultural chemistry – Fertilizers – Enzymes ...</p> <p>Introduction:The problem is clear, the justification is well determined; It is noted that there are studies carried out on this subject, therefore, this treatise apparently belongs to a line of research. The objective of this study remains to be mentioned.</p> <p>Materials and methods:The context presents an important variation and seems to be an important reference for the possible results that are intended to be obtained. The block design and the selected population is correct. It would be important to mention the method to be used for the statistical analysis.</p> <p>Results and Discussion:The discussion and the results show an important contribution to the proposed study. The results are compared with those of other authors correctly. In general terms, the research contains significant contributions to the Agricultural System and the plantation of this fruit. It would be good to mention some possible line of research to be carried out based on the results obtained.</p> <p>Conclusions:The contributions found for the ecosystem, population and economy clearly show that this study should be socialized with the academic community.</p> <p>Bibliographic references:The references support an investigation, those worked on here are fine, however it is suggested in this type of study that they be at least in a range of 30-40.</p> <p>I suggest taking into account the requirements of the Journal.</p>	
Minor REVIEW comments		
Optional/General comments	THE STUDY IS IMPORTANT FOR ITS RESULTS AND ACADEMIC-SOCIAL CONTRIBUTIONS. I SUGGEST ITS PUBLICATION ALWAYS THAT THE RECOMMENDATIONS GIVEN ARE TAKEN INTO ACCOUNT.
