

Review Form 1.6

| | |
|--------------------------|--|
| Journal Name: | Asian Journal of Research in Agriculture and Forestry |
| Manuscript Number: | Ms_AJRAF_93696 |
| Title of the Manuscript: | Factor affecting Purchase of Quality Wood: Understanding Perceptions of Wood Workers using Logistic Regression Model |
| Type of the Article | Original Research Article |

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

PART 1: Review Comments

| | Reviewer's comment | Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here) |
|-------------------------------------|---|---|
| Compulsory REVISION comments | <p>-The conclusion is almost obvious in advance and it is the ideal situation for customers in all wood markets. This conclusion can be predicted without using a logistic regression model or doing any research.</p> <p>-Please explain how did you measure and asses the reliability of the questionnaire?</p> <p>-The independent variable of age is not seen in the experimental model.</p> | |
| Minor REVISION comments | <p>-The relevant literature review is not sufficiently presented in the introduction section. Other examples of the application of regression models or other quantitative and statistical models in understanding the perception of customers in the wood industry or other industries should be mentioned.</p> <p>-Please mention the logistic regression model equations and explain the formulas briefly.</p> | |
| Optional/General comments | <p>-Some issues raised in the discussion section are unrelated to the goals and approach of the current article. In the present research, the application of the logistic regression model for Understanding Perceptions of Wood Workers is emphasized, and it is expected that quantitative approaches and models used by other researchers will be presented and compared in this regard.</p> | |

PART 2:

| | Reviewer's comment | Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here) |
