

Editor's Comment:

The paper can be accepted only after revision to fulfill the following.

1. Statistical significance is not applied with proper method. Anova to be followed by appropriate tests like Dunnet's or Tukey, to compare among groups.
2. The conclusion to be revised as to, the herbal plant as selected, have a potential as myocardial protective agent as a chronic treatment **(but not for treatment for acute emergency such as MI where drugs with rapid actions are needed).**and **P<0.05 is not enough to declare the plant as alternative treatment for MI.**
