

Editor's Comment:

The subject of the manuscript is of practical interest.

Most of essential remarks from the two Reviewers have been considered in the revised version of the manuscript.

Yet, a phrase in the Conclusion section is quite non-understandable and should imperatively be corrected: please check in particular at the yellow underlined piece of this sentence, which makes no sense:

"From the present study it was concluded that among the different nutrient sources S₂ (50 per cent N equivalent through FYM and 50 per cent N equivalent through VC) resulted in higher growth, yield attributes and yield of chia crop and was found on par with S₃, whereas lower growth, yield attributes and yield of chia was with S₁. "

Otherwise, the revised manuscript seems OK for publication in IJECC.
