PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments		
Minor REVISION comments	<p>The introduction is too long, it should have between three and five paragraphs, and the first step must be an epidemiological contextualization of what will be studied. The second, or second and third, should be the theoretical basis of what will be presented, going from the general to the specific. In the fourth, the problem must be presented, where the gap for the study must be identified and the last must bring the objectives and even the hypotheses to be contemplated in the study. References are not in accordance with the journal's standards. I suggest updating the references, many more than 5 years old. It is essential to present the studies for and against to the findings and explain the outcomes. Present the limitations. The conclusion should present practical applications for the findings.</p>	
Optional/General comments
