

Editor's Comment:

Authors have addressed all the concerns raised by reviewers. However, authors should consider below mentioned suggestions before publication:

1. Authors should provide ethical approval number in the Materials and Methods section not in Abstract.
2. Needs to abbreviate packed cell volume, white blood cell count, red blood count etc where they appear first in abstract and other part of manuscript.
3. Introduction section has very small paragraphs. They need to merge with the consideration of their meaningfulness.
4. Normally people consume bitter melon fruits, not leaves. Why did the author study leaf extract?
