

EDITORIAL COMMENT'S on revised paper (if any)

Authors' response to editor's comments

It unnecessary in the chapter on material and methods - identification of microorganisms to state the explanations why a particular test is used, nor to describe them in such detail, for example, Gram staining, indole test, citrate test, etc.

However, at least the rest of the description of the method should be removed from the abstract. In this part of the text, the sentence should end after the name of the agar used.
