PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments		
Minor REVISION comments		
Optional/General comments	Congratulations on an excellent, well presented case history paper and the much needed review you conducted for the education of fellow researchers and clinicians. You did an excellent job of discussing the causal factors. I would like you to consider—but will not require—adding interstitial tooth and jaw sepsis citations in your otherwise excellent review of the primary sources actinomycosis gram positive pathogens as I believe it is possible the largest source of such cases, at least in our experience. The orderly method used to unfold and describe each of the two cases read like a polished pathology report, and allowed the reader to see the condition from two biological and demographic perspectives.	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
