PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>-There are already many articles regarding middle ear tuberculosis. The author(s) have stated on page 1 "The aim of this work is to draw the attention of our colleagues in otorhinolaryngology, ENT and general practitioners to chronic tuberculous otitis media". I guess if it is a new case in Morocco or the area where the author(s) are working author(s) should mention that place in the statement above.</p> <p>-On page 2 the author(s) stated "The audiogram revealed a cophosis on the left the CT scan of the rocks (figure: 2)" what does it mean? Where is the audiogram?</p> <p>-Why caseous necrosis is not seen in the histological examination (Figure 4)?</p> <p>-How can the author(s) explain the CT scan in (Figure 2)? There are many CT slides and there is no vector to show what the problem is.</p> <p>-Can not follow the remaining of the article (some parts of page 3 and all pages 4 and 5). Page 4 is repeatedly written on page 5. Author(s) is/are suggested to write the manuscript step by step under a heading and prefer to write in a single column to decrease the errors.</p>	
Minor REVISION comments	<p>-The author (s) better mention the hospital or the location where this case was found and operated (page 1).</p> <p>-There are many abbreviations that have no explanation, for example, EAC on page 2. Author(s) prefer to write the detail once.</p> <p>-On page 3 what does "In general, ENT localization primarily concerns the middle ear" mean?</p> <p>-On page 3 there is no heading for treatment.</p> <p>-Figure 4 does not give meaningful information. The author(s) should show the cells by vectors and if possible, in a visible slide of the cells.</p>	
Optional/General comments
