Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>This is a retrospective case series that evaluated MULTISYSTEMIC INFLAMMATORY SYNDROME IN Children. There are several issues that need to be addressed.</p> <ol style="list-style-type: none"> 1) Please revise the title of the manuscript 2) "It's a serious disease characterized by immune dysfunction with multisystemic involvement and severe symptoms usually requiring hospitalization. This syndrome is also known as pediatric multisystemic inflammatory syndrome with a temporal link to SARS-CoV-2 (SIMP-TS or SIMP). Its main clinical signs are fever, the typical features of Kawasaki disease, cardiac dysfunction; and gastrointestinal, neurological and/or renal symptoms. In the laboratory, there is an inflammatory syndrome (a noticeable increase in the level of C-reactive protein, accelerated sedimentation rate), lymphopenia, neutrophil hyperleukocytosis, thrombocytopenia, hyponatremia, hypertriglyceridemia and hypo albuminemia. Immunomodulators used for Kawasaki disease, such as intravenous immunoglobulins and glucocorticoids, are treatment options." Please cite references in this section. 3) Authors stated that "The objective of this work is to specify the epidemiological, pathophysiological, clinical, biological, radiological, therapeutic and evolutionary characteristics of MIS-C in its patients and compare them with data from the literature." Much is already known about characteristics of MIS-C. What was the reason behind conducting this study? It should be mentioned clearly. 4) Elements revealing a coagulopathy (by TP, TCA, high D-dimers); Please provide full form when used for the first time. This should be considered throughout the manuscript. 5) The manuscript needs extensive revision for language and grammar. 6) Throught the manuscript, there are many statements which are not supported by references. For e.g MIS-C can occur at any age, most commonly in previously healthy children between the ages of 6 and 12. They usually occur after 3 to 6 weeks following exposure to Covid-19. This should be addressed throughout the manuscript. 7) The discussion part should be rewritten and should be more focused on the research question. 8) The conclusion section should be updated to provide a clear message that the author want to convey to the audience 	
Minor REVISION comments		
Optional/General comments
