Compulsory REVISION comments		
Minor REVISION comments	This paper is well written. However I found an issue that the author pointed out in the conclusion saying that "from 2022 onwards, NAUTH will experience a decline in TB cases". The author should refer to which part of the calculation they draw this conclusion. It is mentioned that this is a retrospective study, to what degree the conclusion validates. It has to be supported by a solid argument.	
Optional/General comments
