

### **Editor's Comment:**

I have read the reviewer's comments about the manuscript 2022/IJTDH/93218, and the improvements included by the authors.

Manuscript Title: **The Current Situation and Management of Omicron with Children in Russia: A review**

According to the reviewer's criticisms, the manuscript 2022/IJTDH/93218 unfortunately cannot be recommended for publication in [International Journal of TROPICAL DISEASE & Health](#).

The study proposal is quite ambitious, seeking to delimit the management of a viral disease in a population group (children) in an entire country of continental dimensions. However, the authors use images with questionable intellectual property, and present some sources in limited quantity and scientific relevance. The body of references/evidence does not support an adequate analysis and discussion about the epidemiological reality and public health treatment policies implemented by a nation. Thus, a more careful and robust scientific approach, as indicated by one of the reviewers, is necessary to avoid erroneous conclusions that could cast doubt on a nation's health management practices.
