

Editor's Comment:

The decision for this article is accepted after considering the important minor notices mentioned in the attached file of comments.

1- The whole article needs careful revision for some spelling errors like this: **assocaiated - coomunity - indegineuos ,etc.**

2- In introduction; *Penicillum* is a fungus not a bacterium

..... rhizobacteria genera include *Bacillus*, *Azotobacter*, ***Penicillum***, *Athrobacter* and *Azosporillim* [9].

3- In table 4; ***Bacillus*** in first and last row, is not a Gram-negative, rather is a Gram-positive bacterial genus.

4- Regarding references, review the references No. (**22-25-26- 27-28-29-30-31-32**) and compare where they are inserted in both the body text and the final list of references.
