Review Form 1.6

PART 1: Review Comments

| | Reviewer's comment | Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here) |
|-------------------------------------|--|--|
| Compulsory REVISION comments | <p>Dear Author(s),</p> <p>Please find below my concerns and recommendations regarding your manuscript proposal entitled "Impact of Small Enterprise Loan Programme of Palli Daridro Bimochon Foundation on the Beneficiaries Socio-Economic Development: a case of Bangladesh".</p> <p>In the Introduction section, you should clearly define the following important aspects:</p> <ul style="list-style-type: none"> - The research question(s); - The research goal. <p>Also, you should use here some references, because at this moment there are not any references in the Introduction. Thus, I recommend you to cite the following valuable resources: https://doi.org/10.15240/tul/001/2021-2-007, https://doi.org/10.46281/ijsmes.v1i1.62, https://doi.org/10.34104/ajssls.020.056062, https://doi.org/10.1002/app5.286, https://doi.org/10.3390/joitmc5030063. By citing the recommended references, you will improve the general context of your research proposal.</p> <p>At the end of Introduction, you should clearly define the research hypotheses. Every modern research article must have at least one research hypothesis.</p> <p>In the section "Methodology", please define the term "upazila", because the readers don't know what it means.</p> <p>In the section "2.2. Population and Sampling", please clarify the difference between the initial sample size (838 respondents) and the final sample (271 respondents). What criteria did you use to reduce the sample from 838 to 271?</p> <p>In section "2.4. Measurement of Dependent Variable" you present the equation regression model. Please explain how did you select the independent variables. I recommend you to invoke here some references from the literature so that you justify the variables.</p> <p>After table 4, I recommend you to shortly discuss about the problem of multicollinearity and VIF (variance inflation factor). You should cite here https://doi.org/10.3390/admsci10040096 because this article is about multilinear regression technique.</p> <p>The "Conclusions" section should be improved by including the following important aspects:</p> <ul style="list-style-type: none"> - The main findings of your research; - The research limitations; - The managerial implications; - The future research directions. <p>Dear Author(s),</p> <p>Please consider all the above remarks as being constructive recommendations in order to improve the general quality of your manuscript proposal.</p> <p>Kind Regards!</p> | |
