PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	In relation to the use of chloroquine in patients with COVID-19 and the complication regarding heart block, it is necessary to show if there is a real association between both variables, for which a descriptive study should be carried out in a population of patients, using parametric statistical analysis and non-parametric, with a hypothesis statement. Otherwise it is not possible to establish causality.	
Minor REVISION comments	In my opinion, although the cases are interesting, a sample of patients and a more in-depth statistical analysis should be carried out.	
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes. Kindly please write down the ethical issues here in details)</i>
