**PART 1: Review Comments**

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	<p>Revision highly recommended. The aim of the research not clearly stated in the introduction. There is improper placement of information in sections. You are strongly advised to rearrange the presentation of your interesting information. My comments and the sections affected are highlighted in the attached pdf version of the manuscript. Few corrections of grammatical errors also indicated.</p> <p>Your findings should be very clear on the conclusion. The magnitude of the earth and the causes were according to USGS. Beautifully, you delineated the faults trends on the satellite maps and identified location of hydrothermal activity. I found your explanation of the role of hydrothermal activities in the causes of earthquakes as indicated with the presence of hot springs very interesting. Therefore, I recommend you separate your conclusions from the discussion.</p> <p>Full meaning of abbreviations or acronyms should be given in their first appearance, such as DEM, USGS etc.</p> <p>You used two types of format in writing your references. Please choose one that is recommended by the journal and be consistent with it.</p> <p>You got major information from the United State Geological Survey (USGS) without the year of publication and it is not listed in your list of references. It is an error that should be corrected</p>	
<b>Minor</b> REVISION comments
