## PART 1: Review Comments

| | Reviewer's comment | Author's comment *(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)* |
|---|---|---|
| **Compulsory** REVISION comments | This case report showed synovial chondromatosis of the knee. The data support the usefulness of imaging and treatment. Beyond the supportive information, not much new information is presented. Description of figures is missing. One image of each mri sequence would be more useful. Although, etiology is not clearly understood, one of possible causes is osteoarthritis which is clearly seen on x-ray images. I would suggest more emphasis on differential diagnosis which should be established before surgical treatment. Different mri presentation should be discussed. Histology image would be useful. | |
| **Minor** REVISION comments | | |
| **Optional/General** comments | Newer references should be included in this case report. | |

## PART 2:

| | Reviewer's comment | Author's comment *(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)* |
|---|---|---|
| **Are there ethical issues in this manuscript?** | *(If yes, Kindly please write down the ethical issues here in details)* | |
