

**Editor's Comment:**

The manuscript entitled title: **A comparison of the Pearson, Spearman rank and Kendall tau correlation coefficients using quantitative variables** needs to have some further amendments as follows.

- 1) Each equation should be along with its numbers.
- 2) Figure formatting and alignment.

I strongly recommend that the **Asian Journal of Probability and Statistics** should have its own **scientific template as a guideline for the authors.**

**Once the above amendments are made, the paper can be accepted for publication.**
