

Editor's Comment:

There are no references in the introduction.

The introduction is very poor.

Material and methods: What is the design of the study?

What were the variables?

What was the sample size calculation?

What was the statistical analysis?

What was the ethics committee that approved the protocol?

The genetic aspects were shown in the discussion section but in the results, I cannot find anything about it

The authors should search for support to write the article.

I cannot approved the manuscript for publication in the actual presentation.
