Title of the Manuscript:	Assessment of Quantitative Serum SARS-CoV-2-IgM Antibodies in Febrile Children and It's Relation to Radiological Findings in Tanta University Hospital
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<https://www.journalajpr.com/index.php/AJPR/editorial-policy>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	As mentioned in comments there is a small number of patients included in the study; the bias is partially solved due to the split into 3 groups I would skip the expression of the values in percentage (out of 20 cases!!) Is there any reference regarding RT-PCR test results in all patients? Or even rapid test for detecting SARS-CoV2?	
Minor REVISION comments		
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
