

Editor's Comment:

It is the responsibility of the author(s) to present their work in an acceptable format. Unless the paper is in a reasonable format, it should not have been submitted.

Discussion is weak. The discussion needs enhancement with real explanations not only agreements and disagreements. The authors investigated an interesting topic, and the objective of the paper is of worldwide interest and fits well within the overall scope of the journal. So, based on my opinion, the manuscript is acceptable after corrections.
