

Editor's Comment:

The reviewed manuscript (2022/ARRB/ 91744) entitled, **"Aerial phytomass production and growth rate in Andean grasslands, at harvesting and application of natural fertilizers"** to me for a final decision. Indeed, this is a good piece of research work, which has evaluated the aerial cover, canopy height, and aerial phytomass production of five common tall species such as *Calamagrostis intermedia* (paja chamik), *C. antoniana* (hatún pork'e), *C. tarmensis* (pork'e), *Festuca rigidifolia* (chilligua cachi) and *Festuca* sp. (chilligua) on plots fertilized with cattle manure and rock phosphate in Andean grasslands. While reading the manuscript, I found that the authors have done good jobs during revisions as well as improved the manuscript based on the comments/suggestions by the expert reviewers. However, there are still some places where wordings and sentences are not grammatically correct, which are required to be corrected as well as overall English need to be improved. In addition, the whole text including the tables, figures, citations and references should need to be made clear, formatted and arranged according to the prescribed format of the journal. Moreover, the title should be changed to **"Aerial phytomass production and growth performances of five common tall species in Andean grasslands at harvesting and application of natural fertilizers"**.
