

Editor's Comment:

I went through the manuscript both in its original and revised versions. A considerable improvement was made in the revised version and also its structure suits well to the journal. The numerical value of V_0 may be corrected as decimal point.

The comment on this manuscript by the reviewers express its suitability for publication. This manuscript dealing with a gravity model of planets in solar system and far away black holes with variation of velocity for changing inclination is a good piece of work in the field of astrophysics. The authors found the research gap and concentrated to work on it for this manuscript. Also this manuscript falls completely within the scope of the journal.

So at the focus for editorial decision, I am for the publication of this paper in the International Astronomy and Astrophysics Research Journal.
