

### **Editor's Comment:**

The revised manuscript requires substantial and **major revisions prior to publication acceptance consideration** due to the following serious flaws:

1. Duplicated keywords (same as the paper title) must be re-chosen.
2. All equations listed in the text should be numbered.
3. Every variables in the equations must be defined and only once in the entire text.
4. All acronym names must be defined when first appear. What is H, GCV, PCV (the most important results)? Please define.
5. Is K the same as k?
6. Descriptive and discussions on both table results are extremely lacking.
7. No caption has been provided for the second table. In fact, all the tables must be referred to in the text.
8. Comparisons with other, previous results do not necessary support and justify the validity and accuracy of the current study results.
9. Many English syntax and language errors have been detected.
