

Editor's Comment:

This manuscript, in its present form, is a good experimental research **report**. It may be **acceptable for publication as a research journal paper**, if the authors are willing to modify/add/ adjust the following items:

1. Duplicated keywords (same as in the paper title) must be re-chosen. Avoid using abbreviations unless they have been spelled out in full.
 2. Use "and" instead of "&" throughout the entire text.
 3. A clear and justifiable objective statement must be included in the introduction section.
 4. Reasoning behind selecting the two regulators and the specific cultivar must be included in the methodology section.
 5. Discussions of the validity and accuracy of the study results must be supported by solid statistical analyses.
 6. Comparisons between results obtained from the two regulators should be included.
 7. Reasoning for choosing the best final treatment should be incorporated in the conclusion.
 8. Significant contributions derived from this experimental study must be emphasized in the conclusion.
 9. Practical application of the study results should be included in the conclusion.
10. Is the best treatment economical for practical use? In fact this comment has been mentioned by one of the previous reviewer.
