

Editor's Comment:

This manuscript is also a good experimental research report, not a good research paper. There are many flaws in the paper. The authors have to seriously revise and rewrite the manuscript to be acceptable for publication. The following are my suggestions to upgrade this paper:

1. Duplicated keywords (same as the paper title) must be re-chosen to about 4-5 in number.
2. Specific objective and aim must be included in the introduction section.
3. Every equation must be numbered.
4. Use "and" instead of "&" throughout the entire text.
5. Explain "rabi" season to the international readers.
6. Figure 1 is redundant since it uses the same data in Table 2.
7. At the very beginning, the treatments have not been clearly defined. What is 39.35 SC, 18.5 SC, etc.?
8. All acronym names must be defined when first appear.
9. What is "overall mean"? How to compute? How representative is this value?
10. The conclusion is too brief. It only summarizes the best results. What are the implications derived from this experimental study? Any kind of scientific contributions? How to apply the study result findings?
