EDITORIAL COMMENT'S on revised paper (if any)	Authors' response to editor's comments
<p>1. Duplicated keywords (same as the paper title) must be re-chosen to about 4-5 in number.</p> <p>2. Specific objective and aim must be included in the introduction section.</p> <p>3. Every equation must be numbered.</p> <p>4. Use "and" instead of "&" throughout the entire text.</p> <p>5. Explain "rabi" season to the international readers.</p> <p>6. Figure 1 is redundant since it uses the same data in Table 2.</p> <p>7. At the very beginning, the treatments have not been clearly defined. What is 39.35 SC, 18.5 SC, etc.?</p> <p>8. All acronym names must be defined when first appear.</p> <p>9. What is "overall mean"? How to compute? How representative is this value?</p> <p>10. The conclusion is too brief. It only summarizes the best results. What are the implications derived from this experimental study? Any kind of scientific contributions? How to apply the study result findings?</p>	<p>1. Keywords re-chosen from the text.</p> <p>2. Necessary improvements in the introduction part are done.</p> <p>3. All equations were numbered on the recommendation.</p> <p>4. "&" is replaced with "and" in the whole text.</p> <p>5. Necessary meaning of "rabi" is added in the text.</p> <p>6. Figure 1 is removed from the text.</p> <p>7. Necessary corrections in treatments done.</p> <p>8. Acronyms expanded when first appeared.</p> <p>9. "Overall mean" represents the mean % reduction of larval population by each treatment. It is computed by adding all the % reduction of larvae and dividing it by no. of observations i.e., nine observations for each treatment. Overall mean is being used to simply represent the order (increasing or decreasing) of mean % effectiveness of the treatments.</p> <p>10. Necessary corrections in the conclusions are done.</p>
