

Review Form 1.6

Journal Name:	International Journal of Environment and Climate Change
Manuscript Number:	Ms_ IJECC_ 92838
Title of the Manuscript:	Effect of planting time on vegetative characters of different varieties of oriental lily
Type of the Article	

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments		
Minor REVISION comments	<p>Abstract should be cleaning. Keywords???</p> <p>Effect of planting time on vegetative characters of different varieties of oriental lily</p> <p>Abstract</p> <p>The evaluation of varieties for a particular region is an important process in order to screen the potential cultivars for any specific region or climate. Although the varieties may express a unique behaviour under certain area, but it may fail or sustain that peculiar character when grown under different location. Along with varieties, planting time significantly affect the crop production. Therefore, standardization of planting time is very important to get a good growth and excellent quality of cut flowers. By using staggered planting, the flowering period may also be extended for fetching a good price during different occasions. The present investigation comprised five oriental lily varieties along with three planting time (1st fortnight of October, 2nd fortnight of October and 1st fortnight of November) and observations were recorded for various vegetative parameters. Out of the three- planting time, the varieties planted during 1st fortnight of October performed better resulting in terms of maximum plant height, number of leaves, leaf length, leaf width etc. Among the varieties, St. Andrews performed overall best with respect to highest percentage of bulb sprouting, plant height, leaf length, leaf width etc.</p> <p>The title is related to our journal framework. The entire manuscript must first be adjusted to the exact format of the journal.</p> <p>The abstract should be brief and useful. Rewrite the introduction.</p> <p>Literature review means what studies have been done on the topic and what are you saying now. All the equations must be numbered and then their references should be mentioned.</p> <p>All of them should be mentioned in the text. The research method and data collection method should be clarified.</p> <p>References should be written based on APA and powered.</p> <p>Research limitations and suggestions for further studies should also be presented.</p> <p>The all text should be correction about grammar mistakes.</p>	
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
