

Review Form 1.6

Journal Name:	International Journal of Plant & Soil Science
Manuscript Number:	Ms_IJPSS_92004
Title of the Manuscript:	Estimation of Variability and Genetic Divergence in Greengram[Vigna radiata (L.) Wilczek] for Yield Characters
Type of the Article	

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The article presents a scientifically well-conducted study, but leaves its presentation and discussion to be left to its own devices. Thus, a careful review in relation to the formatting of the text and enrichment of the discussion of the results is essential.	
Minor REVISION comments	<p>In order to contribute to the quality of the article, here are some observations:</p> <ol style="list-style-type: none"> 1. Title: delete the term estimation - Variability and Genetic Divergence in Greengram[Vigna radiata (L.) Wilczek] for Yield Characters 2. keywords: don't use acronyms 3. Introtudion: check punctuation in the text; the text mentioned below is permissible, and it is necessary to better explain the methodology or use this information in Material and Methods. <p>«Metroglyph and Index score analysis is the technique was developed by Anderson (1957) to investigate the pattern of morphological variation in chickpea genotypes.</p> <p>The main features of Metroglyph analysis are given below:</p> <ul style="list-style-type: none"> • Analysis is based on first order statistics and therefore, results are statistically morereliable and robust. • Analysis is possible from both replicated as well as non-replicated data. The analysis issimple. • The pattern of variability is depicted by glyph on the graph." <p>Results: do not use acronyms in subtitles; standardize the presentation of Figures and Tables, avoiding excessive colors, keeping the same font and callouts formatting, as sometimes the legend appears above the figure and at another time below. Do not use background colors in tables. The text must refer to the Tables and Figures, a fact that only occurs for Figure 2. The discussion of the results must be enriched because, as it is, only the presentation of the results occurs.</p>	
Optional/General comments	The article should be published only after a rigorous review of formatting and enrichment of the discussion in addition to the aspects presented above.	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
