### **PART 1: Review Comments**

	<b>Reviewer's comment</b>	<b>Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</b>
<b>Compulsory</b> REVISION comments	1- Was a comparative study of the imbalances in some indicators of platelet function between asymptomatic COVID-19 and malaria patients in other settings? 2- Did this study take into account the smoking of the patient, male or female? 3- If the study was conducted in other blood measurements, for example, red blood cells, how would the results be, especially because these cells contain hemoglobin. 4- Do the infected have previous preventive measures for other diseases, such as using antibodies?	
<b>Minor</b> REVISION comments	5- Was it ascertained that the patients and the control group did not drink alcoholic beverages? 6- Did he take into account the history of patients in terms of chronic diseases previously?	
<b>Optional/General</b> comments	7- Why was the age determined from 20-65 years because there are cases less than 20 and more than 65 years old that may affect the results	

### **PART 2:**

	<b>Reviewer's comment</b>	<b>Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</b>
<b>Are there ethical issues in this manuscript?</b>	<u>(If yes, Kindly please write down the ethical issues here in details)</u> <b>Yes, have the legal approvals from the health authorities been taken into consideration to conduct the study?</b>
