PART 1: Review Comments

| | Reviewer's comment | Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here) |
|-------------------------------------|--|---|
| Compulsory REVISION comments | Materials and Methods: This section is not well written. There are numerous grammatical errors in the whole section. The paper needs to be reviewed by an English expert to make reading easy. The study design needs to be elaborated with the inclusion of sample size calculation to make the findings valid. The inclusion and exclusion criteria and types of cases include for study are not stated. As we are looking at effects of drug it is important we are stringent how we recruit patients (subjects). If the sample size is small (as it appears in this case) validity of the inferences will be poor. As it stands we cannot summarise that there is no significant difference between the groups. The authors must state how the subjects were recruited, if they had advanced disease, were all adjuvant therapy or palliative care. Was this study approved by the Review Board of the Institute ; were consent taken from the subjects? Results: The tables need to be improved by including measures used and statistical tests included in the tables. Discussion The discussion needs to link the known literature to the results derived from the study. References; Kindly follow the guide so the format is uniform. | |
| Minor REVISION comments | Grammar and sentence construction requires to be looked into in Materials and Methods | |
| Optional/General comments | | |

PART 2:

| | Reviewer's comment | Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here) |
|---|--|---|
| Are there ethical issues in this manuscript? | <i>(If yes, Kindly please write down the ethical issues here in details)</i> | |
