Optional/General comments	<p>This is a prospective cohort study on 40 patients with COVID-19-infected patients. The clinical cardiac complications such as acute angina pain, heart failure, and arrhythmia were investigated. In the CT severity score, the more severe score for COVID-19 infection was noted in cases with coronary artery occlusion and pulmonary embolic diseases. They conclude that MSCT is beneficial for patients with suspected post-COVID cardiac complications.</p> <p>The study contains valuable information. I recommend its acceptance. The correction of some minor grammatical errors should be considered, according to the attached file.</p>
