

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Journal of Geography, Environment and Earth Science International
Manuscript Number:	Ms_JGEESI_88508
Title of the Manuscript:	Waste Management in the Oil and Gas Industry in Guyana: A Qualitative Study
Type of Article :	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<p>The Editor should want to check the article before sending it to reviewers. In this article, there is no sequence in any section. I strongly rejected this article in the current format. The author should want to rewrite and revise the whole manuscript and give the proper sequence to each section and make it like the original research article.</p> <ol style="list-style-type: none"> 1. Why does the author use only # 6, reference again and again in the same paragraph? It will be better if the author uses them for a single paragraph. 2. Where is reference 1,2,3,4, and 5? 3. Why did the author use the term Chapter in the article? 4. Why the author didn't use the right format of references? 5. What means by recommendations in this article? 6. Figure-1, is very difficult to understand. 7. What is meant by a review of the literature? Then why did the author mention the introduction? 	<p>£ 6 was quoted a few times in the literature review to capture the theme of the study. We have reorganized the document to reflect some similarities to the original.</p> <p>The references for 1, 2, 3, 4, and 5 are in the main document, however, I have made changes to reflect the same in the abstract as suggested.</p> <p>The abstract was constructed separately from the main document.</p> <p>Chapters were included to distinguish the various sections of the document.</p> <p>The referencing style used is Vancouver because it is often used for articles like these. The recommendation is a subtitle used in our format to encourage future studies with guidelines. The Figure provided in this document came from the company Exxon Mobile that participated in the research process.</p> <p>The introduction can be removed, but it is usually inserted in the section just before the review literature</p>
