

**Editor's Comment:**

Regarding the above mentioned and sent paper.

It seems to be like a part of a Ph.D. Thesis (too long I mean)

1. THERE ARE NO KEYWORDS AFTER THE ABSTRACT.
2. The title might be barriers of information, because the final ideas from Conclusions part prove this.
3. Beyond the comparison with Pastoralist agriculture, what is the possible improvement of smart agriculture with less, or no information/communication barriers?
4. Once more, a revision of the paper, to be no more misspellings, or words whose meaning I do not understand: for example, in the Conclusions part it is an expression are bale and, really, I do not understand the form and meaning of it.

After these corrections,

**Ok for publishing.**
