

### **Editor's Comment:**

Accepted after the minor revisions listed under

- the ethical aspects should be addressed (as recommended by one of the reviewers, too): informed consent obtained from the patient, ethical approval provided by the institutional committee etc.
- the abbreviations should be explained the first time they appear in text
- the article needs English correction
- please use Past Tense Simple instead of Past Perfect for case presentation
- the sections of the Abstract must have content corresponding to their title: "Presentation of case" section must contain the entire presentation of the case, "Discussion" section must contain comments on the case, and "Conclusion" section must contain the conclusions drawn by the authors regarding the case presented.
- in the "Abstract" section: Aims – please replace "the authors want to" with "the present study describes"
- in the "Introduction" section: line 41 – please consider "case" instead of "chase"
- the "Conclusions" section should be centered on the presented case, not on generalities from the literature. Please make this change
- some of the References are very old.
