EDITORIAL COMMENT'S on revised paper (if any)	Authors' response to editor's comments
<p>(i) the authors did not provide any data on the prevalence of different malaria parasites species transmission in the country or area they did thier study. In the molecular study the authors only test for <i>Plasmodium vivax</i> and <i>Plasmodium falciparum</i>. Why is that so? How about other malaria parasite species?</p> <p>(ii) the authors did not include the period of study in the revised text as suggested by one reviewer.</p>	<p>Plasmodium falciparum and plasmodium vivax are the majority of the global burden of human malaria, therefore were selected for molecular survey.</p> <p>This survey was performed in 2017 to 2021.</p> <p>These were revised in paper (highlighted in paper).</p>
