

Editor's Comment:

As per my observations,

1. Self Esteem, Depression and Life Satisfaction are the parameters/as titled by the authors could not depend solely on HAART therapy received by the patients, also
2. only about 50% positive response &
3. study on few selective population.

The conclusion derived by in the study looked rather inadequate.

The paper can not be accepted for publication unless an until authors clearly establish some solid base as relevance link of these parameters as mentioned in title with the therapy provided.
