Minor REVISION comments	Yes	
1. Is language/English quality of the article suitable for scholarly communications?		
Optional/General comments	The paper is well written and addresses an important issue facing the modern day society. The model is well formulated and tries to show the interactions between a number of classes of the society based on the exposure to cannabis and its effect on an individual. The impact of information availability in providing an effective control mechanism has been rightly brought out through the model and its analysis. The simulations also help in visualizing the results and effect of control measures. Overall the paper can be accepted in its present form. The parameters in the schematic diagram (Figure 1) are somehow not visible to me. I hope the authors and/or publishers check it once before going ahead, as it is important for the clarity of the work to the readers.
