

**Editor's Comment:**

Manuscript Title: Ischemic Stroke In A Young Adult Patient: Excess Of Factor Viii

The authors have carried out an exhaustive analysis of the observations made by the previous reviewers of the article and have ruled out the most common causes of factor VIII increase, despite the fact that they carried out the toxicological panel, the authors must mention that they ruled out the association with the use of antidepressant.

Once this modification is made, the article can be published.
