

Review Form 1.7

Journal Name:	Asian Journal of Biochemistry, Genetics and Molecular Biology
Manuscript Number:	Ms_AJBGMB_98253
Title of the Manuscript:	Association of A polipoprotein A gene polymorphism with uncompleted Plasmodium Falciparum Malaria in Elfasher City, Northern Darfur.
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Compulsory REVISION comments</p> <p>1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript)</p> <p>2. Is the title of the article suitable? (If not please suggest an alternative title)</p> <p>3. Is the abstract of the article comprehensive?</p> <p>4. Are subsections and structure of the manuscript appropriate?</p> <p>5. Do you think the manuscript is scientifically correct?</p> <p>6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form.</p> <p><u>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</u></p>	<p>1. YES. It was hypothesized that the malaria parasite uses cholesterol and phospholipids from its host, resulting in a decrease in serum HDL. But, it was proved that the lipids profile and APOA genotype were not associated with uncompleted malaria</p> <p>2. YES The title of the article is appropriate for study design.</p> <p>3. YES Abstract of the article is more comprehensive by following all the principles</p> <p>4. YES Appropriately written.</p> <p>5. YES . Well organised. Well written. Ample tables showed scientifically appropriate</p> <p>6. Sufficient and recent references are provided. It was hypothesized that the malaria parasite uses cholesterol and phospholipids from its host, resulting in a decrease in serum HDL Results of this study suggest that the APOA genotypes were not associated with clinical parameter. Study concluded that the assessment of lipid profile parameters plays an important role in effective intervention management in malaria infection.</p>	
<p>Minor REVISION comments</p> <p>1. Is language/English quality of the article suitable for scholarly communications?</p>	<p>YES. Written in simple language. Easy to read and easy to understand. The article is very much suitable for scholarly communications.</p>	
<p>Optional/General comments</p>	<p>Well organised, well written manuscript. Major language errors and grammatical mistakes are not noticed. Manuscript is suitable for scholarly publications.</p>	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Are there ethical issues in this manuscript?</p>	<p>(If yes, Kindly please write down the ethical issues here in details)</p>
