(If not please suggest an alternative title)</p> <p>3. Is the abstract of the article comprehensive?</p> <p>4. Are subsections and structure of the manuscript appropriate?</p> <p>5. Do you think the manuscript is scientifically correct?</p> <p>6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form.</p> <p>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</p>	<p>Yes</p> <p>Yes</p> <p>Yes</p> <p>Yes</p> <p>Yes</p> <p>Yes, they are sufficient, no suggestion.</p>	
<p>Minor REVISION comments</p> <p>1. Is language/English quality of the article suitable for scholarly communications?</p>	<p>Yes</p>	
<p>Optional/General comments</p>	<p>This is very interesting and comprehensive systematic review. It emphasised the importance of adding new biomarkers for better detection of patients who are at risk for CVD (in addition to "standard" risk-factors) and better stratify those with known CV (e.g. for potential personalized treatment). The criteria for study selection are appropriate. Conclusion is in concordance with the results (e.g.results of the studies). I have no further comments.</p>
