

Editor's Comment:

Greetings to the reviewers, for their efforts in reviewing the research.

Take some notes

It is necessary to write the scientific terms in full and then write the abbreviations between the brackets, for them in order to teach the reader to search for their meaning, and that these abbreviations be circulated in the rest of the research paper and not be written in full after that, for this I advise the researchers

For example, in the research abstract, it is written: GCV and PCV

Without an explanation of the entire term for the meaning of this term, and it is mentioned in full and in table number one, and in the FUTURE SCOPE paragraph, the full scientific name is written first, then its abbreviation, and not vice versa, as it was written in this way:

GCV (genotypic coefficient of variation),

PCV (phenotypic coefficient of variation),

supposed

genotypic coefficient of variation (GCV)

phenotypic coefficient of variation (PCV)

So I hope to rewrite the two terms completely in the induction abstract and then their abbreviation and generalize that in the rest of the research, and they were identified in the research in red, and also the reference research is not recent and there are many researches published in the beginning of 2023, benefiting the author and those familiar with this research from the specialized scientists In this area , Also, this paragraph needs to add one or more references. Analysis was performed by using the INDOSTAT method (shaded blue)

The original research article is accepted for publication after making few modifications.
