

Review Form 1.7

Journal Name:	Microbiology Research Journal International
Manuscript Number:	Ms_MRJI_104669
Title of the Manuscript:	Enhanced Phytoremediation Crude Oil Polluted Soil Using Pseudomonas Fluorescens.
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Compulsory REVISION comments</p> <p>1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript)</p> <p>2. Is the title of the article suitable? (If not please suggest an alternative title)</p> <p>3. Is the abstract of the article comprehensive?</p> <p>4. Are subsections and structure of the manuscript appropriate?</p> <p>5. Do you think the manuscript is scientifically correct?</p> <p>6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form.</p> <p>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</p>	<p>Yes it is. Highlights the importance of plants to remove oil from the contaminated soil.</p> <p>Yes, article title is Ok.</p> <p>Yes abstract and keywords both are comprehensive.</p> <p>Yes</p> <p>Yes</p> <p>Yes the references are enough. Just that they could add a few recent references too.</p>	
<p>Minor REVISION comments</p> <p>1. Is language/English quality of the article suitable for scholarly communications?</p>	<p>Yes, the language is Ok, though I found it a little confusing at times.</p>	
<p>Optional/General comments</p>	<p>As a reviewer wish to add that we have seen phytoremediation and also know that it works with microbes, suppose we do a simultaneous study on change in the cellular structure of plants growing there t adds more value. Nothing much just simple sectioning under the microscope may reveal changes if at all, though that will be stress too, but I want to understand, if oil and accumulation happen and if at all oil changes inner structure and cell arrangements. Shall further add value.</p>
