Only households in five sub-districts (1801) were listed. However, the number of households in each village had to be listed, because, rather than distributing the final households in the study equally (n=30 households) to each village, it was better to allocate them proportionally to each village based on the number of households in each village.</p> <p>2). Since the sampling procedure was multistage, it was better to used design effect to correct the estimated sampling variance.</p>	
<p><u>Minor</u> REVISION comments</p> <p>1. Is language/English quality of the article suitable for scholarly communications?</p>	<p>Yes</p>	
<p><u>Optional/General</u> comments</p>
